

Electronic Production Data Management

Data Scavenger's mission is to **simplify and reduce the amount of time and effort** required to share industry data between business partners through the use of a centralized information clearing house.

dsDATA accelerates operational efficiencies, facilitating the exchange of well production data in a secure and auditable environment.

Over 90% of Oil and Gas companies operating wells with third party interests in Canada continue to use this solution for securely sharing partner data.

Key Functions

- Production data is collected by the operating companies and electronically transferred to Data Scavenger's secure dsDATA database.
- Data is made available only to authorized non-operating joint venture and royalty partners.
- Data is retrieved electronically using specific file formats such as CSV, XLS, XLM and PRODML.
- Data is then integrated directly into the partner's production database for access by various disciplines within the company.
- Ability to provide daily PDF production reports from dsPROD to joint venture and royalty partners.

Benefits

- Eliminates faxes, emails, and phone calls between operator and partners.
- Improved accuracy of production forecasting and budgeting in areas that have significant non-op production.
- Daily production data is available within days, not months.
- Lower costs of managing non-op production data.
- Reduction of errors.

dsDATA is hosted in a secure server environment using advanced technology to protect your data

Data Scavenger uses high grade encryption (AES-256 Bit)
Servers are fully managed by Q9 Network INC.

From secure web services to SFTP, Data Scavenger has several secure methods of data transfer

***Your Non-Operated production may already be available in dsDATA.
